REMARKS

The submission of the above documents is not an admission that the information is prior art, analogous or otherwise material. It is respectfully requested that the above-listed documents be considered and made of record in the present application.

European Patent 0121446 A (Item 10) relates to a system for linearizing an amplifier which causes distortions of a signal to be transmitted. According to this document, the input signal to the amplifier and the output signal therefrom are made use of in order to drive amplitude modulators preceding the amplifier such that non-linearities introduced by the amplifier can be compensated for.

DE 3423484 C2 (Item 17) relates to a system for analyzing in delayed real time the frequency spectrum of an information component of a given temporal signal making use of a pipe-line architecture. US 4,674,125 is an English language equivalent of DE 3423484 C2. This document is concerned with analyzing a temporal signal rather than with predistorting a transmission signal make use of, among other things, a time-dispersive element.

DE 4326007 A1 (Item 18) relates to a method for digitally transmitting a signal via a plurality of channels. The signals received via the plurality of channels are merged making use of dispersive systems in order to reduce disturbances introduced by the individual channels. Different approaches for distortion prediction and for decision feedback equalization or coordinated decision feedback equalization are mentioned in DE 4326007 A1. This document does not include any hint as to the particular predistortion performed according to the independent claims of the present application.

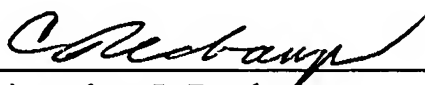

DE 4319216 (Item 19) is concerned with a method for transmission and/or reception of large digital data amounts. This document is not concerned with predistortion techniques but

teaches utilization of the transmitted synchronization signal for restoring the received distorted signal.

The Patent Office is hereby authorized to charge the fee of \$180.00 set forth in 37 CFR 1.17(p) to Deposit Account No. 22-0259 and is authorized to charge any additional fees required or credit any overpayments to this account. Applicants have enclosed a duplicate copy of this paper.
